

# Window Sticker

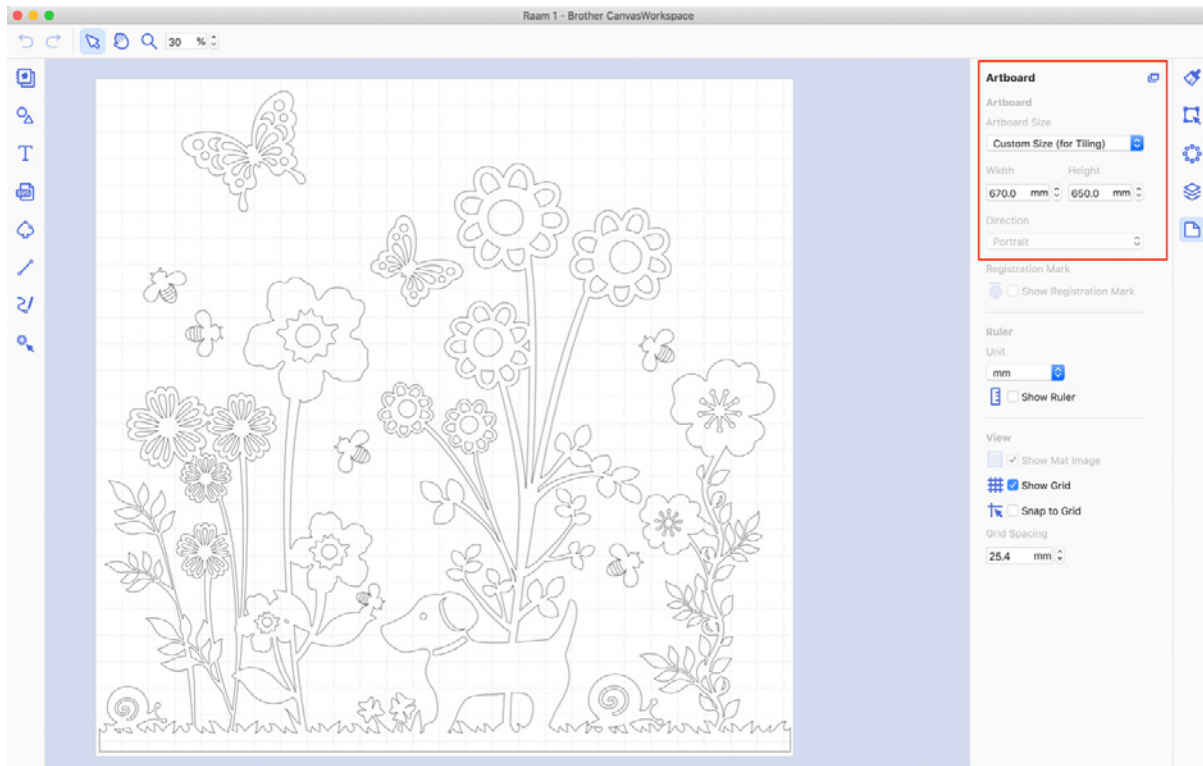

## Instructions:

1. Download all cutting files (Design 1.cwprj & Design 2.cwprj)

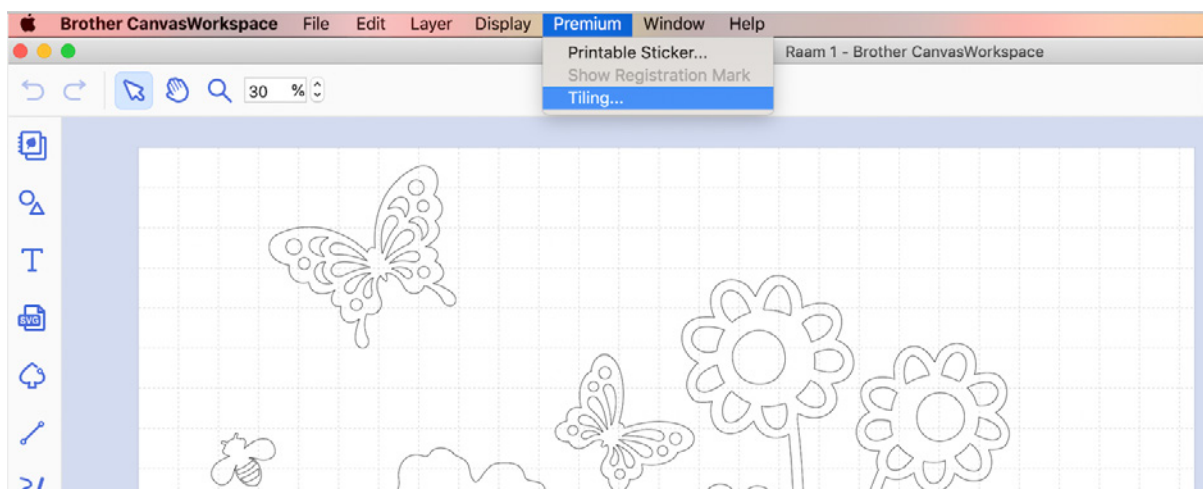

2. Open your chosen file on CanvasWorkspace and amend the size for your artwork according to your needs:

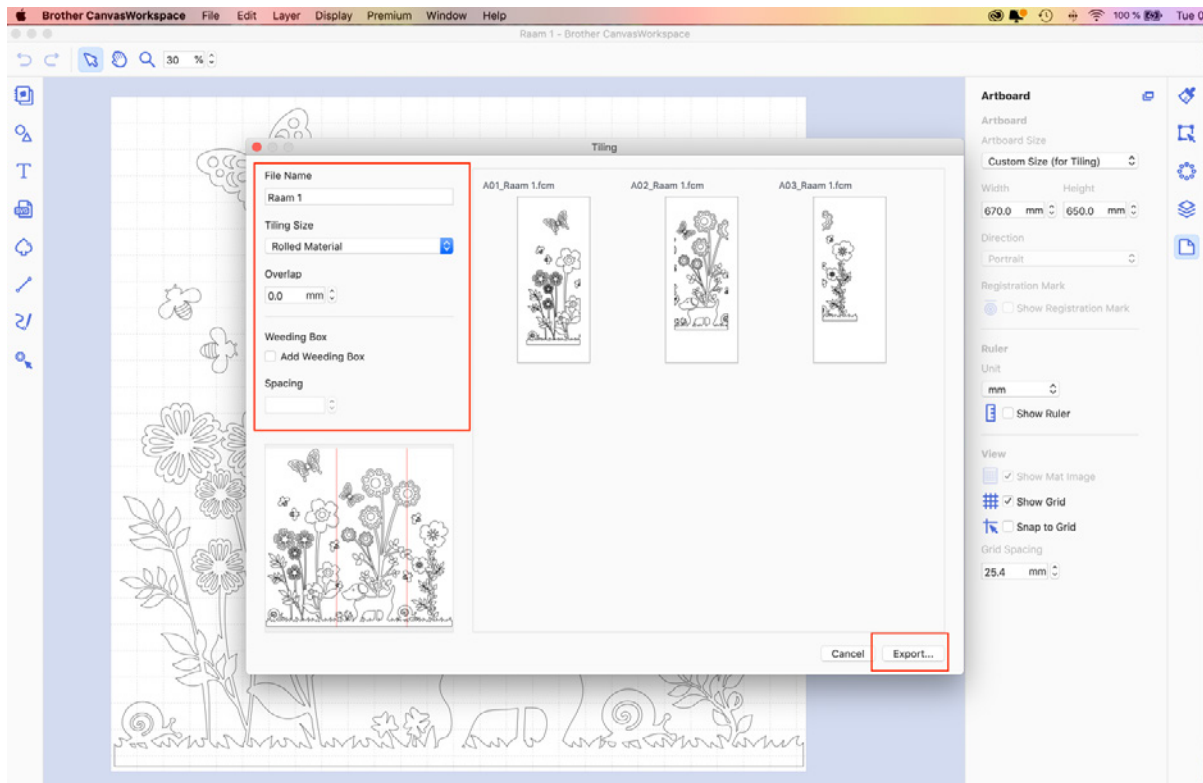

3. Select Premium – Tiling.

*\* Please note that you need the Vinyl Blade Kit installed to use this function.*

4. Choose the size mat or the material you want to cut your project.  
We selected “rolled material” in this case:

5. Export your files and save them accordingly.
6. Then send your files to your ScanNCut DX and start cutting.  
*\* Please note the tiling function is only available for ScanNCut DX machines and requires a separate purchase of the Vinyl Auto Blade Kit or the Disney Vinyl Auto Blade Kit.*
7. Weed (peel off) all ‘unnecessary’ parts out of the cut shape.
8. To transfer the sticker on the window: we recommend using Vinyl Transfer material (slightly bigger than the sticker size).
9. Carefully place the Transfer material on top your weeded sticker.
10. Remove the Transfer material carefully, making sure you remove the whole sticker design from the rolled material. The whole design should now be attached to the transfer material.
11. Position the first part of the sticker onto the window, smooth down and remove the transfer material. Repeat for part 2 and part 3 until the complete sticker design is done.
12. Enjoy your new view!
